

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF CLAIMS:

1. (original) A symbol display device, for a game machine, that determines win or loss of a game according to symbol combinations displayed in a display window, said symbol display device comprising:

plural reel units rotatably aligned in a row behind said display window, each of said plural reel unit being provided with symbols, at least one of said plural reel units being double reels including an inner reel and a transparent outer reel;

a winning symbol provided on a first reel that is one reel of said inner reel and said outer reel, said winning symbol forms a composite symbol by overlaying said winning symbol on said symbol provided on a second reel that is the other reel of said inner and outer reels; and

a controller for controlling rotation of said plural reel units, said controller controls said first reel to stop after rotating in a normal and a reverse directions repeatedly within a range that said winning symbol is displayed in said display window before win or loss of said game is determined.

2. (original) A symbol display device as recited in claim 1, wherein said first reel stops the rotation after said second reel stops the rotation.

3. (original) A symbol display device as recited in claim 1, wherein said winning symbol is provided in the second reel.

4. (original) A symbol display device as recited in claim 3, wherein said controller controls rotation of the second reel to stop after rotating in said normal and said reverse directions repeatedly within a range that said winning symbol is displayed in the display window.

5. (original) A symbol display device as recited in claim 1, further comprising:

a decoration symbol, said decoration symbol provided in the first reel;

wherein said controller rotates the first reel to overlay said decoration symbol on said symbol related to win in the second reel after said win is decided.

6. (original) A symbol display device as recited in claim 5, wherein said decoration symbol is not displayed in said display window while the first reel repeats the rotation in said normal and said reverse directions.

7. (original) A symbol display device as recited in claim 1, further comprising:

a shielding symbol provided in said outer reel, said shielding symbol shields a part of a symbol provided in said inner reel.

8. (original) A symbol display device as recited in claim 7, wherein said shielding symbol is not displayed in said display window while the first reel repeats the rotation in said normal and said reverse directions.

9. (original) A symbol display device as recited in claim 1, wherein plural zones are provided in outer periphery of said first reel;

wherein said controller controls the rotation of said first reel such that only one of said plural zones is displayed through said display window, and changes a zone to be displayed in said display window according to a game stage.

10. (original) A symbol display device as recited in claim 9,

wherein one of said plural zones is a win/loss determining zone consisting essentially of said winning symbol and non-symbol area;

wherein said controller rotates said first reel in said normal and said reverse directions in a range that only said win/loss determining zone is displayed in said display window.

11. (original) A symbol display device, for a game machine, that determines win or loss of a game according to symbol combinations displayed in a display window, said symbol display device comprising:

plural reel units rotatably aligned in a row behind said display window, each of said plural reel unit being provided with symbols thereof, at least one of said plural reel units being double reels including an inner reel and a transparent outer reel;

a winning symbol provided on a first reel that is one reel of said inner reel and said outer reel, said winning symbol forms a composite symbol by overlaying said winning symbol on said symbol provided on a second reel that is the other reel of said inner and said outer reels; and

a controller for controlling rotation of said plural reel units, said controller controls said first reel to stop after rotating in a normal and a reverse directions repeatedly within a range that said winning symbol is displayed in said display window.

12. (original) A symbol display device as claimed in claim 11, wherein plural zones are provided on outer periphery of said first reel;

wherein said controller controls the rotation of said first reel such that only one of said plural zones is displayed through said display window, and changes a zone to be displayed in said display window according to a game stage.

13. (original) A symbol display device as claimed in claim 12, wherein one of said plural zones is a win/loss determining zone consisting essentially of said winning symbol and non-symbol area;

wherein said controller rotates said first reel in said normal and said reverse directions in a range that only said win/loss determining zone is displayed in said display window.

14. (new) A symbol display device for a game machine, said symbol display device comprising:

plural reel units rotatably aligned in a row behind a display window, each of said plural reel units having symbols on an outer peripheral surface thereof, at least one of said plural reel units having double reels including an inner reel and a transparent outer reel;

a winning symbol provided on a first reel of said inner and outer reels, said winning symbol forming a composite symbol

by overlaying said winning symbol with a symbol on a second reel of said inner and outer reels; and

means for controlling rotation of said first reel to rotate in a normal direction and a reverse direction repeatedly.

15. (new) A symbol display device as recited in claim 14, wherein said controller controls rotation of the second reel to stop after rotating in said normal and said reverse directions repeatedly within a range that said winning symbol is displayed in the display window.

16. (new) A symbol display device as recited in claim 14, further comprising:

a decoration symbol, said decoration symbol provided in the first reel;

wherein said controller rotates the first reel to overlay said decoration symbol on said symbol related to a win in the second reel after said win is decided.

17. (new) A symbol display device as recited in claim 16, wherein said decoration symbol is not displayed in said display window while the first reel repeats the rotation in said normal and said reverse directions.

18. (new) A symbol display device as recited in claim 14,
further comprising:

a shielding symbol provided in said outer reel, said
shielding symbol shields a part of a symbol provided in said inner
reel.

19. (new) A symbol display device as recited in claim 14,
wherein said outer peripheral surface of said first reel is
divided into plural zones;

wherein said controller controls the rotation of said first
reel such that only one of said plural zones is displayed through
said display window.

20. (new) A symbol display device as recited in claim 19,
wherein one of said plural zones is a win/loss determining
zone consisting essentially of said winning symbol and non-symbol
area;

wherein said controller rotates said first reel in said
normal and said reverse directions in a range that only said
win/loss determining zone is displayed in said display window.
